#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Maruta et al.

The applied reference has a common asignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Maruta et al disclose a construction machine having an engine (1), a hydraulic pump (2) driven by the engine, an actuator (7, 29) driven by the pump, a regenerative motor (18) connected to a rotation shaft of the pump (via 21, 25), an electrical power generator (19) connected to the rotation shaft of the regenerative motor, and an electricity storage device (20) for storing generated electrical power. Wherein the electrical power generator works as an electric motor to drive the pump, the rotation shafts of the electrical power generator and regenerative motor are provided separately from the rotation shaft of the pump, and the electrical

power generator, pump, and regenerative motor can be operated together via interlock means (not numbered). (Fig. 4)

Page 3

## Allowable Subject Matter

Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patents 6349543, 6666022, and 6725581 disclose construction machines having regenerative motors and electrical power generators.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Leslie whose telephone number is (571) 272-4819. The examiner can normally be reached on M-F 8:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Look can be reached on (571) 272-4820. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
